SUMMARY

Highly dedicated Software Engineer and Data-driven Developer with extensive experience in developing web-based applications. Proven track record in database design, query optimization, and transforming raw data into meaningful business insights. Proficient in modern frameworks and modern database management systems to deliver scalable, efficient, and analytic-ready solutions.

TECHNICAL EXPERTISE

- **Programming Languages** : PHP, JavaScript, Java, Python.
- **Frameworks** : Laravel, CodeIgniter, React.js, Vue.js, FastApi.
- **Database & Analytics** : MySQL, PostgreSQL, Query Optimization, Data Extraction, Data Cleansing, Reporting & Dashboarding.
- **Operating Systems** : Linux, Windows, MacOS.
- **Development Tools** : Web Development, Progressive Web Application

WORK EXPERIENCE

Ejen2u International Sdn. Bhd | Selangor, Malaysia (Remote)

June 2022 – March 2026

Full-stack Developer | October 2023 – March 2026

- Leverage Model-View-Controller (MVC) architecture to design and implement end-to-end features for SaaS applications, ensuring seamless data pipeline integration.
- Apply advanced problem-solving skills to identify system bottlenecks, optimize complex SQL queries, and deliver efficient technical solutions for large-scale data processing.
- Collaborate across the full technology stack to improve user interface responsiveness and develop interactive dashboards for business metrics monitoring.
- Manage complex data flows between frontend components and server-side logic, performing data cleaning and validation to ensure data integrity.
- Extracted and analyzed user behavioral data and transaction logs to provide actionable insights for product and feature improvements.

Back End Developer | June 2022 – September 2023

- Developed and maintained robust server-side logic using PHP and the Laravel framework, structuring complex databases for efficient data retrieval.
- Ensured code reliability and software quality through automated testing using PHPUnit.
- Built and optimized structured HTML components for seamless integration with backend services.
- Focused on database management, data warehousing concepts, and API development to support scalable application growth and data aggregation.

Full-stack Developer

- Developed web-based application products for corporate clients, incorporating advanced reporting modules and data visualization charts.
- Maintained and optimized existing systems to improve performance, refactoring legacy database schemas for faster reporting and data analysis.
- Collaborated with business stakeholders to transform raw operational data into structured, easy-to-understand reports.

EDUCATION

Bachelor of Computer Science2013 - 2017

Universitas Muslim Indonesia

LANGUAGE

- **Indonesian:** Native.
- **English:** Intermediate.
- **Japanese:** Beginner (Currently learning grammar and vocabulary).
